Fingerprint Sensor

Sample for Android

Contents

This sample detects a fingerprint sensor on your Android mobile device. It requires building a custom client.

Building a Custom Client

You can build a custom client as follows:

1. Copy the files from the **FingerPrint-src** folder to the folder **Android\Source\app\src\main\java\…\magicdev**.

2. Copy the files from the **FingerPrint-res** folder to the **…\src\main\res** folder.

3. In the **RIAModules\Android\Source\app\src\main\AndroidManifest.xml** file, add a permission as follows:

    <uses-permission android:name="android.permission.USE_FINGERPRINT" />

4. Add the following activity to the AndroidManifest.xml file before client creation as follows:

    <activity android:name=".FingerprintActivity"></activity>

5. Build the customized client.

That's it. You can now detect fingerprint on your mobile device by running the sample.

About Magic Software Enterprises

Magic Software Enterprises (NASDAQ: MGIC) empowers customers and partners around the globe with smarter technology that provides a multi-channel user experience of enterprise logic and data.

We draw on 30 years of experience, millions of installations worldwide, and strategic alliances with global IT leaders, including IBM, Microsoft, Oracle, Salesforce.com, and SAP, to enable our customers to seamlessly adopt new technologies and maximize business opportunities.
